## Information and Communications Security WS 2020/21 Assignment 2 <br> Cryptography

Please prepare your solutions for the following exercises. We will discuss them on the $26^{\text {th }}$ of May 2020.

## Exercise 1 (Caesar Cipher)

A Caesar encryption is given by the following encryption function:

$$
e_{k}: \mathbb{Z}_{26} \rightarrow \mathbb{Z}_{26}, \quad x \rightarrow(x+k) \quad \bmod 26
$$

with $k \in \mathbb{Z}_{26}$
a) Encrypt the message "perfect indistinguishability" using $e_{10}$.
b) What is perfect indistinguishability?
c) Does the condition of perfect indistinguishability hold in general for the Caesar Cipher? Give a two-line explanation.
d) What attacks can be used to break the Caesar Cipher?

## Exercise 2 (Stream Ciphers)

a) What is a one-time pad (Vernam-code)?
b) Zoe wants to encrypt the letter Z. The letter is given in ASCII code. The ASCII value for Z is $90_{10}=1111010_{2}$. Using Vernam-code, which of the following keys are suitable to encrypt this plaintext?
b1) 11100100
b2) 0011101
b3) 101011
c) Encrypt the message using Vernam-code, XOR as an encryption function and the key in b).

## Exercise 3 (Vigenère Cipher)

a) What is the Vigenère Cipher?
b) In the following you are given the key $k=$ "GOETHE" and the cyphertext $c=$ "CSWMLRJWWMOISCWMIIGIXBMYRQEFWYY". Identify the message $m$ using the running key variant as given in the lecture. Show the necessary steps (use the Vigenére tableau below when necessary).

```
    ABCDEFGHIJKLMNOPQRSTUVWXYZ
A A BCDEFGHI JKLMNOPQRSTUVWXYZ
B BCDEFGHIJKLMNOPQRSTUVWXYZA
C CDEFGHI JKLMNOPQRSTUVWXYZAB
D DEFGHHIJKLMNOPQRRSTUVWXYZABC
E EFGHIJKLMNOPQRSTUVWXYZABCD
FFGHIJKLMNOPQRSTUVWXYZABCDE
GGHIJKLMNOPQRSTUVWXYZABCDEF
HHIJKLMNOPQRSTUVWXYZABCDEFG
I I JKLMNOPQRSTUVWXYZABCDEFGH
JJKLMNOPQRSTUVWXYZABCDEFGHI
KKLMNOPQRSTUVWXYZABCDEFGHIJ
L LMNOPQRSTUVWXYZABCDEFGHIJK
M MNOPQRSTUVWXYZABCDEFGHIJKL
NNOPQRSTUVWXYZABCDEFGHIJKLM
OOPPQRSTUVWXYZABCDEFGHIJKLMN
PPQRSTUVWXYZABCDEFGHIJKLMNO
Q QRSTUVWXYZABCDEFGHI JKLMNOP
R RSTUVWXYZABCDEFGHI JKLMNOPQQ
S STUVWXYZABCDEFGHIJKLMNOPQR
TTUYWXYZABCDEFGHIJKLMNOPQRS
UUVWXYZABCDEFGHIJKLMNOPQRST
VVWXYABCDEFGHI JKLMNOPQRSTU
WWXYZABCDEFGHIJKLMNOPQRSTUV
XXYZABCDEFGHIJKLMNOPQRSTUVW
Y.YZABCDEFGHI JKLMNOPQRSTUVWX
ZZABCDEFGHE JKLMNOPQRST UVWXY
```

## Exercise 4 (Asymmetric Cryptosystems and RSA)

a) Describe differences between symmetric and asymmetric cryptosystems.
b) Alice wants to send a message $m$ to Bob. Because the message is a secret, Alice encrypts the message using RSA. Complete the flow chart below and also show the necessary calculation steps for encryption and decryption. Indicate which information are public or known only by Bob or Alice.
$\underbrace{\text { I Want to send you a message }}_{\text {( }}$
c) Consider an RSA cryptosystem. The following keys were made public: $e=5, n=21$.
i. Encrypt the message $m=3$ using RSA
ii. Determine p and q (factorize $n$ ).
iii. Determine the private key d.
iv. Decrypt the cyphertext and check that the result is $m=3$
v. What is the problem with the chosen keys?
d) Decrypt the message $\mathrm{c}=2$ using RSA. The private key of the receiver is $d=3$ and $n=15$.
e) Let $n=221$. Use Fermat's method to factorize $n$. (Hint: $n=x^{2}-y^{2}=(x+y)(x-y)$ )
f) Why is it possible to break RSA with Post-Quantum Cryptography?
